

Los Altos Community Botball Team Announcement for 2009 Season Michael & Travis Schuh

Summary

Botball is a robotics sports program that is made up of teams that use a robot controller, motors, switches, analog sensors, digital sensors, and LEGO pieces to construct a robot. The teams use their robots to compete against each other in a game that takes place on a 4' x 8' playing field.

The robots try to score more points by moving and placing playing field objects in scoring positions. Through the last six years, the Los Altos Community Botball Team has won many awards at the Northern California Botball Tournaments and the National Botball tournaments. For the 2009 season, we are looking for highly motivated and interested Jr. High and High School students to join the team. We also need parents to support the team. For more information, contact me at Michael@Boardsailor.com or at my home phone number (650) 965-8037.

Botball Competition

The goal of the KISS Institute Botball program is to interest and excite high school and middle school students in the areas of science and engineering as they design, construct, and program autonomous robots. The Botball program gives teenagers a challenge where they learn engineering and programming skills through hands-on experience with robots. The Botball program has been around for many years with local area competitions. The next competition will be held on Saturday March 28, 2009 at the Santa Clara University Leavey Center. The challenge will be announced on February 8, 2009. More information about Botball can be found at www.botball.org and www.kipr.org.

Time Commitment

We have found that robot team participants often quickly grow to love the robotics program and want to spend as much time on it as they can. We usually schedule five hours of meeting time a week, but we expect that the most enthusiastic members will spend much more time working on the project. This will of course be at the discretion of the team members. We will likely meet on Fridays after dinner and on Sunday afternoons. Typically, parents spend most of their time with regards to the team transporting their children to and from the meetings and cheering them on at the competition.

Pre-Season Meetings

We will be holding meetings before the competition starts to teach new members how to program and to bring returning members back up to speed. These meetings are important because we have found that once the challenge is released, most fundamental robotics learning stops and team members focus on building robots for the game. **It is very important that team members attend all of the training meetings.**

Coaching Style

Michael, the coach, thinks the team members benefit the most from the robotics programs if they do all the designing, building, and programming. He encourages them, stays out of the way, and as needed requests that other parents do the same. He makes sure that all of the materials are available and that the team members understand the task. Then he steps back and helps only when needed. The teams that he has coached have had fun, learned a lot, and done well in competitions. The team this year will be run by a team captain selected by vote of the team.

Cost

The cost of a team is \$2,400 of which \$2,300 is the team registration fee. We have already fund raised most of this. We may have two teams depending on how much interest and parental support we have. We are going to try and keep the cost per team member to be between \$200 and \$300. If all goes well, it might be less. I think the optimal size of a team is six students and the maximum team size is eight students. The main organization is the KISS Institute for Practical Robotics (KIPR). It is a public charity under IRS code 501(c)(3). All contributions to KIPR for our team are tax deductible to the extent allowed by law and will defray the expenses for all the team members of the Los Altos Community Team. Since donations are tax deductible and fees are not, we encourage all parents to make a tax deductible donation in the \$200 to \$300 range to cover the team registration. After we have received all of the donations, each team member will

be responsible for their part of the remaining cost. Anyone who drops out by January 24 will be given a full refund. We are benefiting this year from some extra funds from last year so any extra funds will be saved for use for the next year's team.

Meeting Place

For the meetings, we are planning on using Michael's home at 1630 Elmhurst Drive. This is off Truman between Fremont and Oak. If we have enough interest to support more than one team, we may need another meeting site. The meeting place needs to have room for a 4' x 8' playing field and several laptop computers. Regular PCs or Macs with OSX are also fine.

Schedule

January 5	Informational Meeting for potential team members and their parents at 1630 Elmhurst Drive, 7:30 PM – 9 PM.
December - January 9	Identify potential team members.
January 9	Applications due.
January 14	Notify applicants who are on the team.
January 24	Last day to drop and receive full refund.
January 9- February 6	Team meetings from 7:00 PM until 9:30 PM to cover <ul style="list-style-type: none"> • 1/9 – Programming the robots in Interactive C • 1/16 – Subversion & Programing • 1/23 – State Program Structure • 1/30 – Control Theory & Doxygen • 2/6 – Team organization including discussing expectations and determining team guidelines.
February 7-8	Botball training workshop – 2 team members can go. Game announced on February 8.
February 8-March 27	Build, design, program, and prepare for the competition. Meetings will likely be Fridays 7:00 PM until 9:30 PM and Sundays 1:00 PM – 3:30 PM.
March 28	Tournament Day at Santa Clara University
July 1-5	Nationals Tournament in Lansdowne, Virginia

Assistance is Needed

Michael has volunteered to coach a team. He may need some help managing the team and will let the parents know what he needs as he needs it. If we have enough interest to support two or more teams, we will need a second coach and another meeting place and the cost will likely be higher. The team also needs help with fundraising.

Rules

All participants are expected to help design, build, and program the robot. Team members can specialize or work on a variety of tasks. In order to be an effective team, members who are disruptive or disrespectful inside or outside of the team meetings will be warned and then removed from the team. The coach will have final say in who is accepted, removed or kept on the team. Michael has yet to remove a team member but reserves the right to do so if the need arises. Most of the team meetings are lots of fun with some great camaraderie.

Other Options for being on a Botball Team

If you want to be on a Botball team other than this one or you didn't make our deadlines, you can find all of the information you need to form a team at www.botball.org or you can talk with us about it. If you missed the application deadline and are still interested, check with us to see if we have room for you.

How to Apply

Send in your Application Information to Michael Schuh and mail him your donation. We would also like applicants to email Michael Schuh at michael@boardsailor.com letting him know of your desire to join the team. The check will not be cashed until applicants are notified that they are on a team. Applicants can request their money back and remove their name from the list at any time before January 24. We would like everyone to donate in the \$200 to \$300 range. If this is more than you can contribute, please include a check for what you are able to contribute. Botball qualifies for some company donation matching programs, so please consider this if one of these is available for you. Botball is not an educational institution so company donation matching programs that require the organization to be an educational institution will not work.

Application Information

Name: _____

Grade: _____ Age: _____ School: _____

Phone number: _____

Mailing Address: _____

Email Address: _____

Parent's Name(s): _____

Parent's Email Address(es): _____

Check Amount (Made out to the KISS Institute for Practical Robotics): _____

I have read the cost and rules sections of the announcement and understand that that the team coach makes all decisions as to who will be on a team and reserves the right to remove a member after one warning for unacceptable behavior.

_____ Student's Signature

_____ Parent's Signature

Mail your signed application form and check to Michael Schuh at 1630 Elmhurst Drive, Los The application is also available at <http://www.boardsailor.com/botball>
